

YAGS

Yet Another Golf Simulator

Release Notes

4/15/2026 - Ver. 0.8

Hello world!!! 😊

This is the first version of YAGS that I have chosen to share with the world. It should be fully functional (for the initial features anyway), but please let me know if you find any crashes (*not* feature suggestions, those will come later).

Not yet implemented

- Online course lookup (coming soon, but for now you have to enter your course pars and yardages manually)
- Advanced Stats UI (it still looks a bit weird, and I want to add **more** stats too)

Installation instructions

- YAGS is available for both Android and iOS mobile devices. As beta software, I am not releasing the app in the App Store or Play Store *just yet*, so for now you will have to manually load the app onto your phone.
 - For Android it is easy enough – just download the APK to your device and then open it to install
 - For iOS it is a bit more complicated
 - beta apps must be “sideloaded” using a third-party app like [Sideloadly](#).
 - Also, sideloaded apps need to be “trusted” by you (via Settings → General → VPN & Device Management → davekalin@gmail.com → Trust)
 - Finally, sideloaded apps have to be re-installed every 7 days (I would recommend backing up your data before re-installing)

I know it's a bit complicated for now, but as soon as I get a real Apple Developer license it will get much easier to distribute beta (and release) versions. Stay tuned.

Sample Data

- I have included a sample database file so you don't have to load in the par/SI/yardage just to test out the app. It contains all the city golf courses for Los Angeles (including all tees and yardages), and a few sample rounds. It should help you get started.
